Data Analyst

[Freelance](#)

Remote

5/2022 - 12/2022

- Developed interactive data visualization web applications using Streamlit, enabling dynamic data exploration and presentation.
- Utilized Plotly and Seaborn libraries to create comprehensive and visually appealing charts and graphs, effectively conveying insights from complex datasets.
- Established connections to various databases, extracting and transforming data for analysis and visualization within web applications.
- Completely automated the marketing platforms' user-experience testing process by integrating Nightwatch Selenium.

Web Scraper

Remote

5/2021 - 04/2022

- Used Python to scrape important data from multiple websites, static or dynamic. The data helps companies or individuals make better informed decisions.
- Utilized Selenium for dynamic web scraping, handling complex web navigation and extracting data from interactive web pages.
- Transformed raw web data into structured and organized datasets using Python's Pandas library, streamlining data preparation and analysis.
- Saving the scraped data in desired format like google sheets, CSV, JSON or excel.

Projects

- [React BMS Dashboard](#) : A dashboard to manage blogs uses Context Api for state management, local storage and Axios for api integration.
- [Django BMS Restful Api](#) : A blog management system made with DRF that uses JWT for auth, serializers, ORM and swagger.
- [CryptoCurrency Tracker](#) : A Python bot that tracks crypto currencies and updates the google sheets when there's a change in prices.
